

Robocom Announces Federal Aviation Administration Approval for Phase II of the RIMS Warehouse Management System Installation

MASSAPEQUA, NY, February 10, 2004 -Robocom Systems International Inc. (OTCBB: RIMS) announces that after a successful Phase I Conference Room Pilot implementation of RIMS, Robocom's Inventory Management System, the FAA has opted to continue with a full integration deployment of RIMS to meet its current and future distribution requirements at the Mike Monroney Aeronautical Center Oklahoma City facility.

"We believe that the implementation of RIMS at the FAA's Logistics Center will result in increased operational efficiencies in our distribution and fulfillment processes and better management of the assets under our control. These two benefits will translate to superior customer service at a reasonable cost as we seek to continually build on our success as the core logistics supply chain to America's National Airspace System," said Stan Sieg, Chief Financial Officer of the FAA Logistics Center.

The Federal Aviation Administration has released funding for Phase II of its contract with DUCOM, Inc. of Silver Spring, MD, a prime contractor to the Federal Aviation Administration to install the RIMS warehouse management system in all the FAA distribution centers at the Oklahoma City facility.

Robocom Systems International Inc. (www.robocom.com) develops, markets and supports advanced Warehouse Management Systems software that enables customers to expand productivity, reduce costs and increase profits. Contact: Judy Frenkel of Robocom at 516-795-5100 or jfrenkel@robocom.com.
